## Proposition 38

If two medial (straight-lines), commensurable in square only, which contain a medial (area), are added together then the whole (straight-line) is irrational—let it be called a second bimedial (straight-line).

For let the two medial (straight-lines),  $AB$  and  $BC$ , commensurable in square only, (and) containing a medial (area), be laid down together [Prop. 10.28]. I say that  $AC$  is irrational.

For let the rational (straight-line)  $DE$  be laid down, and let (the rectangle)  $DF$ , equal to the (square) on  $AC$ , have been applied to  $DE$ , making  $DG$  as breadth [Prop. 1.44]. And since the (square) on  $AC$  is equal to (the sum of) the (squares) on  $AB$  and  $BC$ , plus twice the (rectangle contained) by  $AB$  and  $BC$  [Prop. 2.4], so let (the rectangle)  $EH$ , equal to (the sum of) the squares on  $AB$  and  $BC$ , have been applied to  $DE$ . The remainder  $HF$  is thus equal to twice the (rectangle contained) by  $AB$  and  $BC$ . And since  $AB$  and  $BC$  are each medial, (the sum of) the squares on  $AB$  and  $BC$  is thus also medial.<sup>‡</sup> And twice the (rectangle contained) by  $AB$  and  $BC$  was also assumed (to be) medial. And  $EH$  is equal to (the sum of) the squares on  $AB$  and  $BC$ , and  $FH$  (is) equal to twice the (rectangle contained) by  $AB$  and  $BC$ .

Thus,  $EH$  and  $HF$  (are) each medial. And they were applied to the rational (straight-line)  $DE$ . Thus,  $DH$  and  $HG$  are each rational, and incommensurable in length with  $DE$  [Prop. 10.22]. Therefore, since  $AB$  is incommensurable in length with  $BC$ , and as  $AB$  is to  $BC$ , so the (square) on  $AB$  (is) to the (rectangle contained) by  $AB$  and  $BC$  [Prop. 10.21 lem.], the (square) on  $AB$  is thus incommensurable with the (rectangle contained) by  $AB$  and  $BC$  [Prop. 10.11]. But, the sum of the squares on  $AB$  and  $BC$  is commensurable and twice the (rectangle contained) by  $AB$  and  $BC$  is commensurable with the (rectangle contained) by  $AB$  and  $BC$  [Prop. 10.6]. Thus, the sum of the (squares) on  $AB$  and  $BC$  is incommensurable with twice the (rectangle contained) by  $AB$  and  $BC$  [Prop. 10.13]. But,  $EH$  is equal to (the sum of) the squares on  $AB$  and  $BC$ , and  $HF$  is equal to twice the (rectangle) contained by  $AB$  and  $BC$ . Thus,  $EH$  is incommensurable with  $HF$ . Hence,  $DH$  is also incommensurable in length with  $HG$  [Props. 6.1, 10.11]. Thus,  $DH$  and  $HG$  are rational (straight-lines which are) commensurable in square only. Hence,  $DG$  is irrational [Prop. 10.36]. And  $DE$  (is) rational. And the rectangle contained by irrational and rational (straight-lines) is irrational [Prop. 10.20]. The area  $DF$  is thus irrational, and (so) the square-root [of it] is irrational [Def. 10.4]. And  $AC$  is the square-root of  $DF$ .  $AC$  is thus irrational—let it be called a second bimedral (straight-line).<sup>§</sup> (Which is) the very thing it was required to show.
